Real Time Event Log Data Filtering, Analysis, Alerting, Reporting, and Archiving

GOLIATH TECHNOLOGIES®

Comprehensive proactive performance monitoring for virtual, physical, and cloud environments.

Windows event log data is a critical source of key information for troubleshooting issues and supporting broader business objectives. Goliath Performance Monitor Log Management and Log Analysis solution makes log data useful for daily security reporting, daily operations analysis, and compliance auditing. Windows Event Log, Syslog, application logs, and machine data can be viewed, analyzed, alerted upon, reported, and archived in real time from Goliath Performance Monitor's single dashboard and delivered to your IT staff.

Goliath Performance Monitor Log Management Features

- ✓ **Central Console**
  - Log Analysis
  - Troubleshooting
  - Log Search
  - Filtering
  - Drill Down
  - Real Time
  - Security Analysis
  - Alerts
- ✓ **Proactive Management**
  - Set thresholds based on specific events and patterns
  - Rapid search capability for troubleshooting
  - Template based compliance reporting
- ✓ **Windows Event Log Management Agent**
  - Log Management Agent can also be used to monitor:
    - Applications on the server
    - Server health including CPU, Memory, Disk, Network Latency, Bandwidth, Processes, and Services

Windows Event Log Management

- ✓ **Filter**: Customize Windows event log collection on basis of type, log, event ID, description, source, or user.
- ✓ **Analyze**: Consolidate the most important events from across all your servers into one Centralized Real Time View.
- ✓ **Alert**: Set notifications to take place as soon as a failure or fault occurs or a condition has been met. You can then simultaneously initiate automated remediation actions when coupled with the Goliath Performance Monitor.
- ✓ **Report**: Run custom Historical Reports based on filtered and archived event logs.
- ✓ **Archive**: Access your actual .evt and .evtx files for as long as you want. Our agent pulls the files, compresses them, and then stores them to a storage location for long term archive and retention.

Real Time Event Log Data Filtering, Analysis, Alerting, Reporting, and Archiving

GOLIATH TECHNOLOGIES®

Comprehensive proactive performance monitoring for virtual, physical, and cloud environments.

Syslog Management

Goliath Performance Monitor provides a rule-based method of capturing and filtering incoming Syslog messages for any Syslog exporting system, device or application. The Syslog Server filters Syslog messages by sender, facility, severity, and message content for easy rule creation and to quickly identify important messages. This simple and easy to use solution allows IT staff to associate alert conditions with automated fix actions for known solutions or send a notification to bring attention to a developing condition. A wide range of systems and applications are supported, including Linux/Unix servers, routers, and switches.

✓ **Filter**: Customize Windows event log collection on basis of type, log, event ID, description, source, or user.
✓ **Analyze**: Consolidate the most important events from across all your servers into one Centralized Real Time View.
✓ **Alert**: Set notifications to take place as soon as a failure or fault occurs or a condition has been met. You can then simultaneously initiate automated remediation actions when coupled with the Goliath Performance Monitor.
✓ **Report**: Run custom Historical Reports based on filtered and archived event logs.
✓ **Archive**: Access your actual syslog files for as long as you want. Our agent pulls the files, compresses them, and then stores them to a storage location for long term archive and retention.

End-to-End Monitoring and Reporting

Goliath Performance Monitor is a comprehensive monitoring solution providing end-to-end visibility into your entire physical and virtual infrastructure. Goliath exploits the gap that exists between high cost enterprise solutions and inexpensive utilities by offering a comprehensive set of features that allow the user to monitor virtual servers, physical servers, VDI, network devices, desktops, databases and applications from a single view at a cost just above freeware.

About Goliath Technologies

Goliath Technologies provides proactive IT Operations software for organizations that address the evolving challenges of deploying virtual server and virtual desktop infrastructure whether on premise or in the cloud. Our solutions are purpose built for these emerging platforms and application delivery methods so they are vastly easier to use with greater functionality than alternative legacy products or point solutions. We communicate with existing enterprise frameworks, network centric solutions, and other IT management tools so we complement and extend existing IT investments with our virtual server and virtual desktop specific functionality. Customers include ADP, UHS, VA, Wyndham Hotels, NASA, Thomson Reuters, Overstock.com, MySpace, and Xerox.
