Proactive Performance Monitoring for Allscripts

The Goliath Performance Monitoring Module for Allscripts was built with input from hospitals who deployed Sunrise and Touchworks in their Citrix environment, and needed a proactive troubleshooting and remediation solution to fix end user experience issues before physicians and healthcare workers were effected.

Goliath Technologies' proactive Performance Monitoring Module for Allscripts is Healthcare IT's only software that correlates end user experience metrics, Allscripts, and Citrix performance data to give you a single view into the root cause of Allscripts performance issues.

Allscripts Database Performance

Allscripts Server Performance

Allscripts Application Faults & Errors

Allscripts - Health Report
