

Realize the full potential of the NetScaler ADC, regardless if it is deployed as a Full Proxy, Load Balancer or VPN Gateway. Leverage deep analytical data for performance tuning, troubleshooting, real-time alerting and historical reporting. Goliath for NetScaler from Goliath Technologies allows for the monitoring and management of the entire NetScaler deployment fully aggregated in a single pane of glass. Highly scalable, the Goliath for NetScaler technology can support over 18,000 transactions per second, while providing out of the box real-time dashboards, and unrestricted historical reporting and data exports.

This technology provides deep visibility into real-time and historical information including:

- ✓ Enterprise NetScaler management from a single pane of glass
- ✓ Application, User, Server and Network performance
- ✓ Application response time in XenApp and XenDesktop
- ✓ What applications are being accessed and how often
- ✓ What type of device is accessing applications
- ✓ Which users are accessing and requesting server resources
- ✓ Server latency and response time (RTT)
- ✓ Network Jitter
- ✓ Load balancing failures
- ✓ And much more

Simple, Customizable Dashboard

- Customizable dashboards can provide real-time and historical data
- Drill down into dashboards to isolate conditions
- Export data or print reports for historical analysis
- Full management reporting requirements
- Send data to monitoring products or enterprise management systems

Web Intelligence

- User experience and behavior
- Monitor access from any platform – workstation, thin client, tablet, mobile device or browser
- Identify the most commonly accessed URLs on your sites
- Round-trip response time
- Traffic analysis
- Identify which users or sources are accessing your website
- Infrastructure performance
- Server latency
- Web server utilization
- Load balancing performance
- Error messages
- Abandoned Sessions
- Error status codes

Citrix XenApp & XenDesktop

- User session connectivity
- Session load times
- Logon data ICA client versions
 - Remote user
 - Frequency
 - Failed
 - Internal v. External
- Application usage patterns
- Correlate remote logons to applications accessed
- Connection auditing
- Web interface availability
- Load balancing failures
- User identification
- Name of the application being accessed
- What type of device is accessing the application
- Real-time performance data about the XenApp session

Data > Information > Action

Goliath for NetScaler allows you to view all user, server and device performance data in unrestricted Customizable reports. The reports are fully interactive, allowing you to drill into key areas of information such as XenApp and XenDesktop session activity, applications being launched, VIP performance, web server performance and overall performance of the NetScaler device. Interactive, live reports can be shared with other team members with no additional licensing or product requirement.

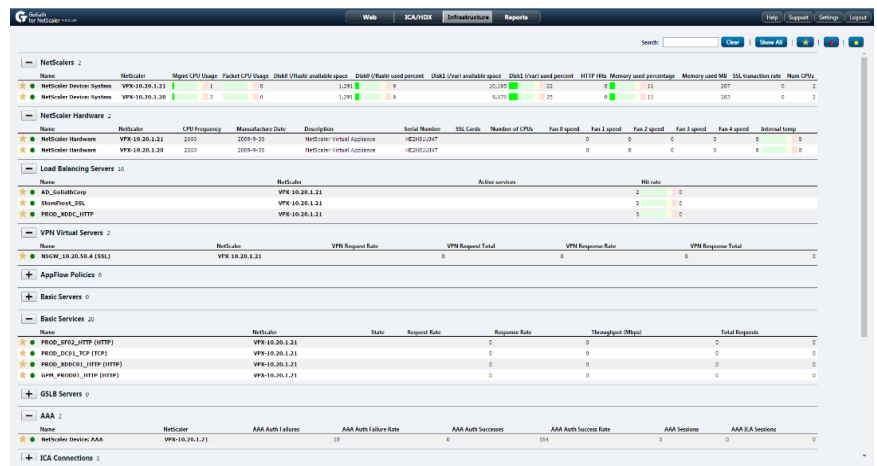

Highly scalable for use in very large enterprises which further differentiates it from other alternatives

"Having the ability to manage an enterprise NetScaler deployment from a single pane of glass is key to operational acceptance in most organizations. With GFN this is now possible and provides a great way of organizations to monitor, manage and plan their NetScaler designs and deployments. This purpose built platform is highly scalable for use in very large enterprises which further differentiates it from other alternatives."

**Kyle Davies - Solutions Architect @ CDW
Citrix Expert, Atlantis ACE, vExpert 2016**

The Infrastructure display shown to the right provides a single pane of glass for IT administrators to view their entire NetScaler deployment, track NetScaler resource utilization across multiple NetScaler's, the load of configured virtual servers, services and policies.

By leveraging the NetScaler Nitro APIs, Goliath for NetScaler can deliver detailed performance & health metrics from all components across the enterprise aggregated in a single view.

The infrastructure dashboard powered by Nitro API integration combined with the web application and ICA/HDX dashboards, driven by AppFlow deliver the most comprehensive NetScaler monitoring solution on the market today.

About Goliath Technologies

Goliath Technologies provides proactive IT Operations software for organizations that address the evolving challenges of deploying virtual server and virtual desktop infrastructure, whether on premise or in the cloud. Our solutions are purpose-built for these emerging platforms and application delivery methods so they are vastly easier to use with greater functionality than alternative legacy products or point solutions. We communicate with existing enterprise frameworks, network centric solutions, and other IT management tools, allowing us to complement and extend existing IT investments with our virtual server and virtual desktop specific functionality. Clients include ADP, UHS, VA, Wyndham Hotels, NASA, Thomson Reuters, Xerox, Verizon Wireless, and Cox Communications.
